

Homework #3 Chapter 9 plus Sequence Diagram

CINS 370 Introduction to Databases

Due Friday February 17, 11:59pm

70 points

1. Do Exercise 9.3 (The book has a typo. It pertains to Figure 6.6 and not Figure 6.14.)
2. Do Exercise 9.5
3. Do the Sequence Diagram exercise that is included below.
4. As with all HW, any diagrams should be created using a graphical tool. The draw.io and [Lucidchart.com](https://lucidchart.com) are popular free app. In other words, do not scan hand-written work. Thanks.

9.3 - Map the relational schema of **Figure 6.6** into an ER schema. This is part of a process known as reverse engineering, where a conceptual schema is created for an existing implemented database. Include cardinality notation with all relationships by stating any assumptions you make.

BOOK

<u>Book_id</u>	Title	Publisher_name
----------------	-------	----------------

BOOK_AUTHORS

<u>Book_id</u>	<u>Author_name</u>
----------------	--------------------

PUBLISHER

<u>Name</u>	Address	Phone
-------------	---------	-------

BOOK_COPIES

<u>Book_id</u>	<u>Branch_id</u>	No_of_copies
----------------	------------------	--------------

BOOK_LOANS

<u>Book_id</u>	<u>Branch_id</u>	<u>Card_no</u>	Date_out	Due_date
----------------	------------------	----------------	----------	----------

LIBRARY_BRANCH

<u>Branch_id</u>	Branch_name	Address
------------------	-------------	---------

BORROWER

<u>Card_no</u>	Name	Address	Phone
----------------	------	---------	-------

Figure 6.6 A relational database schema for a LIBRARY database.

THE FOLLOWING IS INCLUDED TO OFFER AN EXAMPLE ON HOW TO COMPLETE 9.5

9.4 - Figure 9.8 shows an ER schema for a database that may be used to keep track of transport ships and their locations for maritime authorities. Map this schema into a relational schema, and specify all primary and foreign keys.

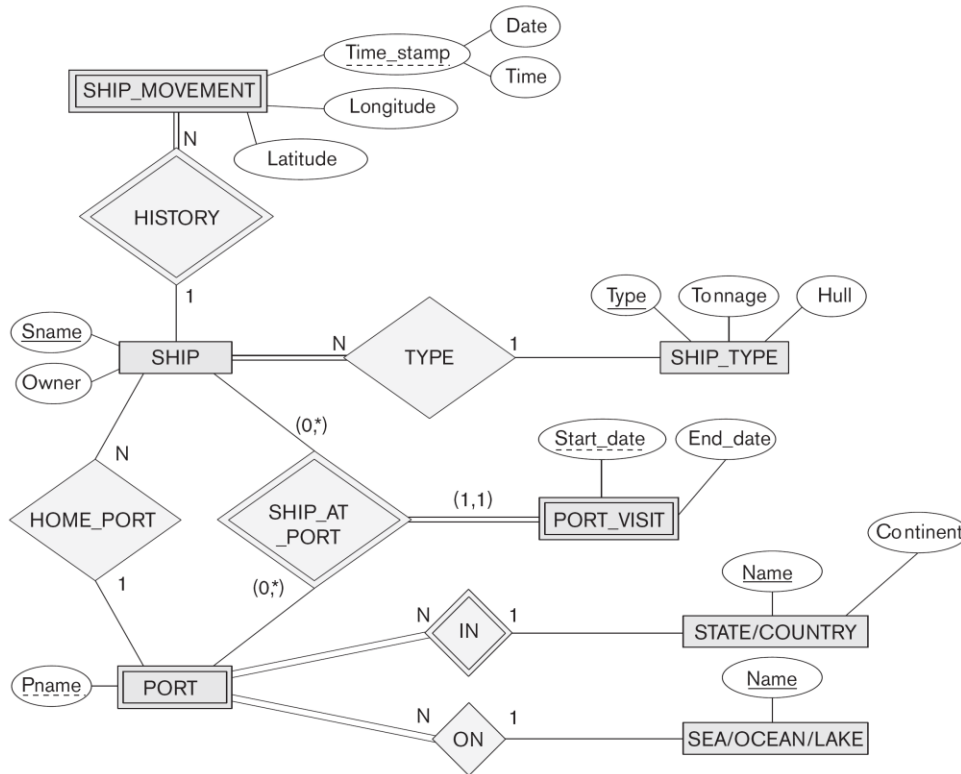

Figure 9.8

An ER schema for a SHIP_TRACKING database.

Answer:

SHIP

<u>SNAME</u>	OWNER	TYPE	PNAME
		FK	FK

SHIP_TYPE

<u>TYPE</u>	TONNAGE	HULL
-------------	---------	------

STATE_COUNTRY

<u>NAME</u>	CONTINENT
-------------	-----------

SEA/OCEAN/LAKE

<u>NAME</u>

SHIP_MOVEMENT

<u>SSNAME</u>	<u>DATE</u>	<u>TIME</u>	LONGITUDE	LATITUDE
FK				

PORT

<u>S_C_NAME</u>	<u>PNAME</u>	<u>S_O_L_NAME</u>
FK		FK

PORT VISIT

<u>VSNAME</u>	<u>VPNAME</u>	<u>STARTDATE</u>	ENDDATE
FK	FK		

9.5. Map the BANK ER schema of Exercise 3.23 (shown in Figure 3.21 below) into a relational schema. Specify all primary keys and foreign keys. Follow the similar example as 9.4 stated above.

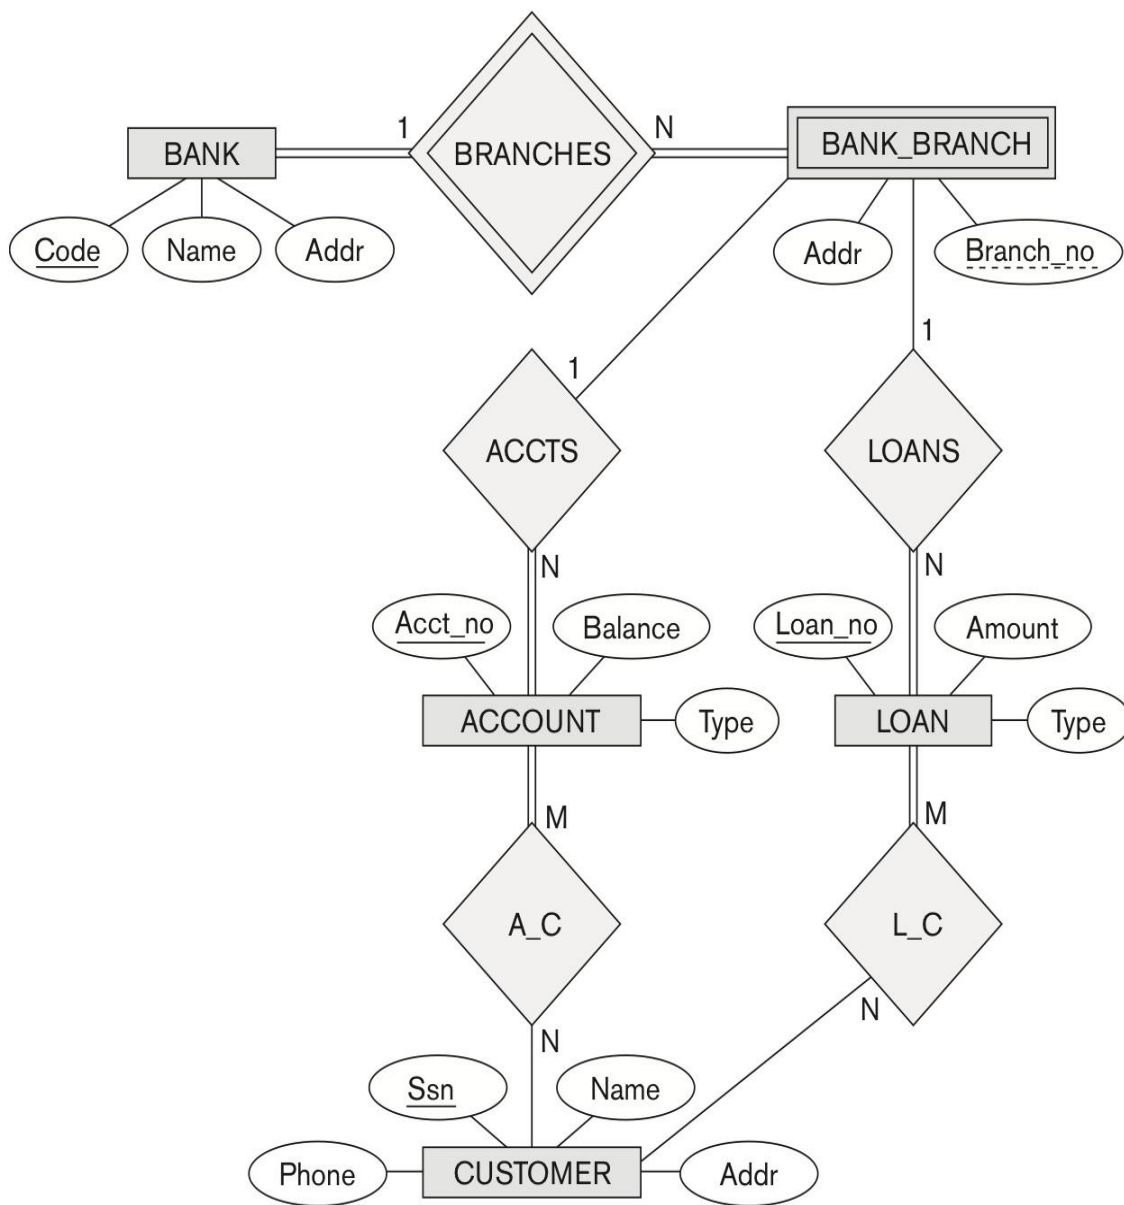

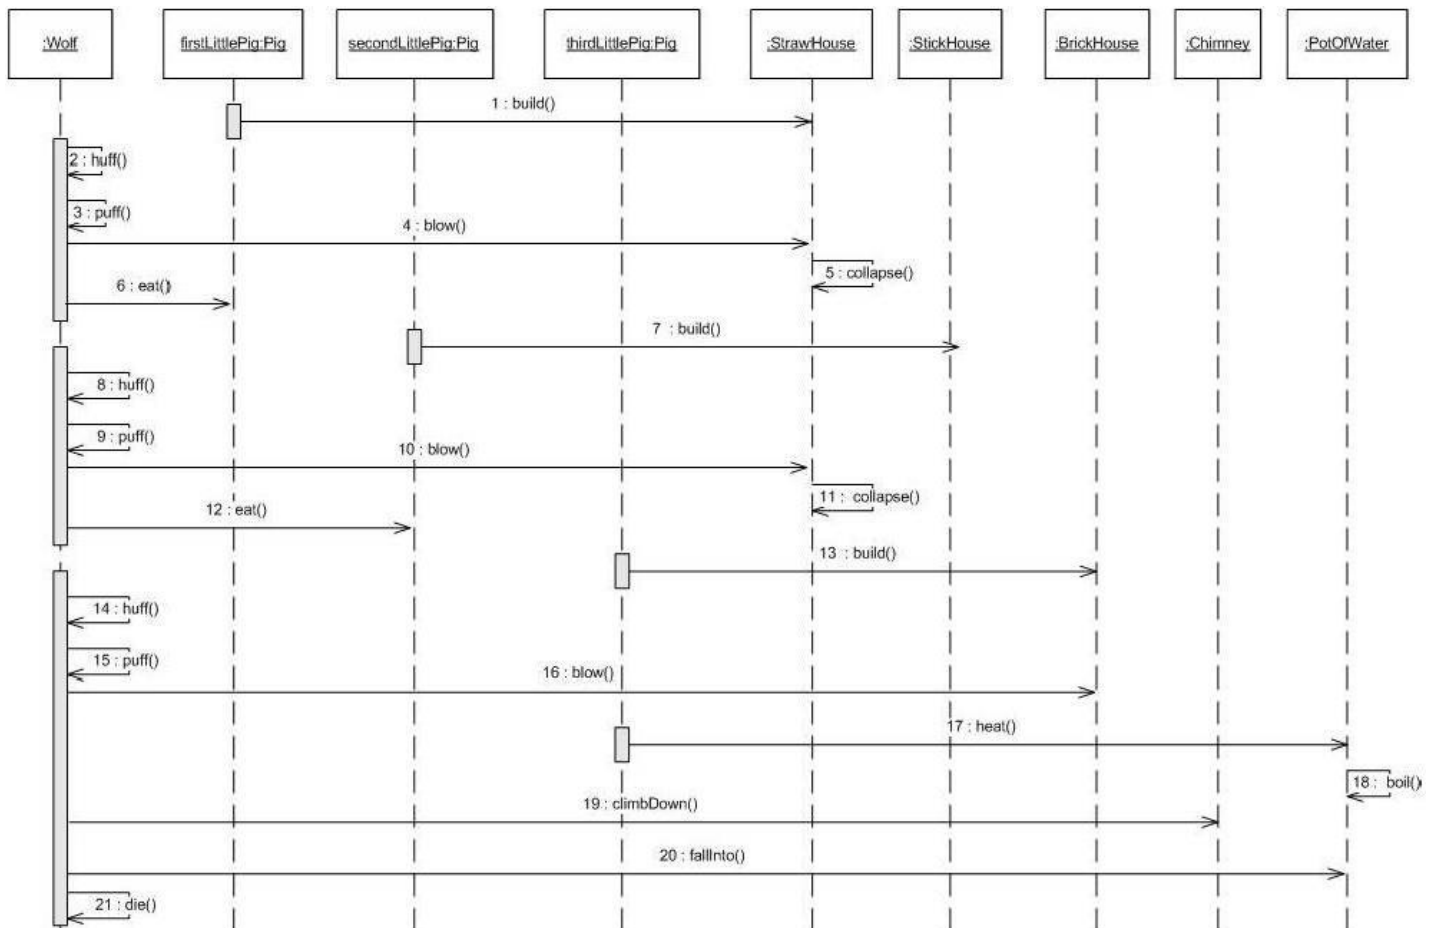

Figure 3.22 An ER diagram for a BANK database schema.

5. Refer to the Sequence Diagram shown below. Modify the diagram as follows:
- Remove the 2nd Little Pig and Stick House
 - Remove the Pot of Water
 - The 1st Little Pig should run to the Brick House once his house is blown (Note: the brick house needs to have been built already).
 - The 3rd Little Pig accidentally shoots and misses when the 1st Little Pig enters
 - The 1st and 3rd Little Pig bind/tie up Wolf after Wolf climbs down chimney

Some additional notes.

- There is no need to represent a gun (shooting instrument) and rope (binding instrument) as objects.
- Concurrent events need to share the same horizontal line.
- It is appropriate to have arrows from right to left.

Submission Steps

Using our class textbook, turn in answers via Blackboard. Hand-written work is not accepted.

Submit only 1 Word/PDF formatted file on Blackboard. Grading will be done on content, correctness, neatness, grammar, timeliness, etc. Please refer to our course syllabus for more submission details.

Please email instructor for any question(s). Keep in mind that if you send your email within 2-3 days before the due date, you may not get a reply on time. This is an incentive to start and complete your work early.
